## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-17, drawn to a method for preventing or reducing cardiovascular disease comprising administration of an ACE inhibitor, classified in class 514, subclass 412 for example.
- II. Claims 18-36, drawn to a method for preventing or reducing cardiovascular disease comprising administration of an ACE inhibitor and a hormone, classified in class 424, subclass 198.1.

The inventions are distinct, each from the other because of the following reasons: Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions employ different method steps, which would necessarily bring about different degrees of pharmaceutical effects. Therefore, the methods of Groups I and II are independent since they are not disclosed as capable of use together, they have different modes of operation, they have different functions,

and/or they have different effects. One would not have to practice the various methods at the same time to practice just one method alone.

The search for each of the above inventions is not co-extensive particularly with regard to the literature search. Further, a reference which would anticipate the invention of one group would not necessarily anticipate or even make obvious another group.

Because these inventions are distinct for the reasons given above and the search required for each Group is not required for the others, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
